

The Next Generation of the Kids Smartwatch - Dokiwatch S Available Now!

HONG KONG – Doki Technologies, a company specializing in kid's smart devices, announced the launch of dokiWatch S in March 2018. It is the next generation of their flagship product dokiWatch, the most advanced smartwatch for kids 6-12 years old.

The S model is a new take on the dokiWatch that includes new and improved functions such as two-way video call, a scheduler, and dual band support. With these implementations, dokiWatch S is an essential tool for kids to communicate and learn time management skills. With dual band support, 3G connectivity will allow more coverage.

List of new features on dokiWatch S:

- **Two-Way Video Call:** Now, not only parents can initiate video calls, but kids will be able to initiate video calls directly from their dokiWatch S!
- **WiFi/ VOIP Call:** Voice calls can now be made on cellular data and WiFi connection. This allows parents to save on cellular plans and sign up for data-only plans instead of needing both data and voice minutes.
- **Scheduler:** Parents can use this efficient tool to manage daily routines such as classes, activities, and bedtime, and teach kids time management.
- **Photo Gallery:** Kids can now save their photos and selfies on their dokiWatch S and organize them. More photos, more fun for the entire family!
- **New Wallpapers:** Kids can now customize their dokiWatch S even more by taking their own pictures or downloading images and setting them as their wallpaper.
- **Dual Band Support:** Dual band support allows for more coverage on the 3G network. Model 1900 will now support both the 1900 MHz and 850 MHz frequency bands, while Model 2100 will support both the 2100 MHz and 900 MHz frequency bands.

The companion Doki App has also undergone significant updates and will feature a revamped user interface for more intuitive usage and a sleek design layout. It will allow parents to communicate, track, and modify settings of their child's dokiWatch with even more ease.

DokiWatch S is currently available for purchase, shipping globally to over 30 countries including the US and Canada. The retail price for dokiWatch S is US\$199 and can be purchased through Doki's online store at www.doki.com. In addition to an online store, dokiWatch S is also available in several retailers and telecoms in Hong Kong including Broadway, Fortress, CSL, and SmarTone.

It's the perfect smart device for children that gives parents the peace of mind they need!

Big Solutions in One Small Device

dokiWatch first launched in 2016 after highly successful Kickstarter and Indiegogo campaigns, raising over US\$400,000.

dokiWatch is the world's most advanced 3G smartwatch for kids 6-12 years old. It is the first-ever kids smartwatch that combines video calling, voice calling, messaging, location-tracking, and fitness tracking capabilities into one simple device. dokiWatch anticipates what families need to keep connected.

dokiWatch has been sold globally to over 30 countries and the company has been working with telecom operators worldwide to bring the dokiWatch to every family.

Not all kids are ready for smartphones yet. With dokiWatch, kids can lead an active childhood while parents can enjoy the security of knowing that they are safe.
